# Read the following passage and answer the questions given below:

For many years after we got our independence, food production went on decreasing steadily. This was mainly because of drought, floods and neglect of agriculture during the first three Five-Year plan periods. Population also increased at a high rate.

A great improvement was made in agriculture in 1967-68. It is popularly known as the 'Green Revolution'. The farmers now follow new methods of farming. One such is the Japanese method of cultivation. New high-yielding varieties of rice, wheat and other grains have been developed in our research institutes. These new strains need more water and more fertilizers than the old ones. So, large irrigation facilities have been made. New dams have been built and canals, dug. Pumpsets have been erected by the farmers for irrigation. Fertilizers are produced in factories in large quantities. Tractors, harvesters, and threshers are also used. All this has greatly increased food production in our country. We no longer need to import food grain from foreign countries.

But Green Revolution has its negative side. It increased the pollution levels and degradation of land. Due to change in land use pattern and employment of two and three crop rotation every year, land quality has gone down and yield has suffered. Use of heavy chemical fertilizer resulted in land becoming hard and carbon material has gone down. Due to heavy crop rotation pattern, we do not give rest to land nor have we time to employ a proper weed removal system, which has increased weeds.

Another degradation is mindless use of pests. Pests that we used to control by biodegradable methods have become resistant to many pesticides and now these chemical pesticides have become non-effective. The greatest effect is the loss of biodiversity: due to heavy use of chemical pesticides, insecticides and fertilizers, we have lost many birds and friendly insects, and this is a big loss in the long term.

Question Number: 53 Question Id: 284703678 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes

Single Line Question Option: No Option Orientation: Vertical

Correct: 1 Wrong: 0

What was the major reason for the Green Revolution?

### Options:

1. Scarcity in food production

Droughts and floods

Scarcity of water

4 \* Famine

Question Number: 54 Question Id: 284703679 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes

Question Label: Comprehension

निम्नलिखित लेख पढ़ें और नीचे दिए गए प्रश्नों के उत्तर दें:

हमें स्वतंत्रता मिलने के पश्चात कई वर्षों तक, भोजन के उत्पादन में निरंतर कमी हो रही थी। इसका मुख्य कारण सूखा पड़ना और बाद आना था। और पहली तीन पंचवर्षीय योजनाओं के दाँरान कृषि की उपेक्षा करना था। जनसंख्या में वृद्धि भी काफी उच्च दर से हुई थी। 1967-68 के दौरान कृषि के क्षेत्र में एक महान सुधार हुआ था। यह लोकप्रिय 'हरित क्रांति' के रूप में जाना जाता है। किसान अब कृषि में नए तरीकों का पालन करते हैं। उनमें से खेती की एक ऐसी ही जापानी विधि है। हमारे अनुसंधान संस्थानों में नए उच्च उपज देने वाले किस्मों के चावल, गेह्ं और अन्य अनाज विकसित किए गए हैं। इन नई किस्मों को पुरानी की तुलना में अधिक पानी और अधिक उर्वरकों की आवश्यकता होती है। इसलिए, सिंचाई सुविधाओं की टयवस्था ट्यापक स्तर पर की गई थी। नए बांधों और नहरों का निर्माण किया गया। सिंचाई के लिए किसानों दवारा पंप-सेट लगाए गए हैं। कारखानों में बड़ी मात्रा में उर्वरक उत्पन्न होने लगे हैं। ट्रैक्टर, हार्वेस्टर और थेसर भी उपयोग किए जाते हैं। इस सबके कारण हमारे देश के खाद्य उत्पादन में काफी वृद्धि हुई हैं। अब हमें विदेशी देशों से अनाज आयात करने की आवश्यकता नहीं हैं।

लेकिन हरित क्रांति का नकारात्मक पक्ष भी है। इससे प्रदूषण के स्तर और भू-क्षरण में भी वृद्धि हुई है। भूमि के उपयोग के पैटर्न और केवल दो या तीन फसलों की खेती को अपनाने की नीति के कारण प्रत्येक वर्ष भूमि की गुणवत्ता में गिरावट आई है और उपज में कमी का सामना भी करना पड़ रहा है। रासायनिक उर्वरकों के भारी उपयोग के परिणामस्वरूप भूमि सख्त हो गई और कार्बन पदार्थ नीचे चले गये हैं। फसलों के अत्यधिक रोटेशन पैटर्न के कारण हम भूमि को विश्राम नहीं देते हैं और न ही खरपतवार निकालने के लिए हमारे पास कोई नियोजित प्रणाली है, जिससे खरपतवार में भी वृद्धि हुई है।

क्षरण का एक और कारण कीटनाशक का अंधाधुंध प्रयोग है। कीट जिन्हें हम जैवनिम्नीकरणीय विधियों द्वारा नियंत्रित करते थे, कई कीटनाशकों के लिए प्रतिरोधी बन गए हैं और अब ये रासायनिक कीटनाशक अप्रभावी हो गए हैं। सबसे बड़ा प्रभाव जैव विविधता को होने वाली हानि है: रासायनिक कीटनाशकों, कृमिनाशकों और उर्वरकों के भारी उपयोग के कारण हमने कई पक्षियों और सहायक कीड़ों को खो दिया है और यह एक बड़ी दीर्घकालिक हानि है। Question Number: 53 Question Id: 284703678 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes

Single Line Question Option : No Option Orientation : Vertical

Correct: 1 Wrong: 0

हरित क्रांति का प्रमुख कारण क्या था?

### **Options:**

1. 🗸 खाद्यान्न उत्पादन में कमी

- 🍃 🧸 सूखा और बाढ़
- 🧝 🗯 पानी की कमी
- 🛾 🗯 अकाल

A vessel contains a mixture of grape, pineapple and banana juices in the respective ratio of 4:6:5.15 litres of this mixture is taken out and 8 litres of grape juice and 2 litres of pineapple juice is added to the vessel. If the resultant quantity of grape juice is 10 litres less than the resultant quantity of pineapple juice, what was the initial quantity of mixture in the vessel?

### **Options:**

1 \* 120 litres

> \* 150 litres

3 × 105 litres

4. 135 litres

Question Number : 61 Question Id : 284703686 Question Type : MCQ Option Shuffling : Yes Display Question Number : Yes Single Line Question Option : No Option Orientation : Vertical

Correct: 1 Wrong: 0

एक बर्तन में अँगूर, अनन्नास और केले के जूस का मिश्रण क्रमश: 4: 6: 5 के अनुपात में है। बर्तन में से इस मिश्रण की 15 लीटर मात्रा निकाली जाती है और 8 लीटर अँगूर का जूस व 2 लीटर अनन्नास का जूस मिला दिया जाता है। यदि परिणामस्वरूप प्राप्त मिश्रण में अँगूर के जूस की मात्रा अन्नानास जूस की मात्रा से 10 लीटर कम है, तो बर्तन में मिश्रण की प्रारंभिक मात्रा कितनी थी?

### **Options:**

1 🙎 120 लीटर

2 🙎 150 लीटर

🛪 🗶 105 लीटर

4 💉 135 लीटर

### Question Number: 77 Question Id: 284703702 Question Type: TYPING TEST Display Question Number: Yes

Pangea, also spelled Pangaea, in early geologic time, a supercontinent that incorporated almost all the landmasses on Earth. Pangea was surrounded by a global ocean called Panthalassa, and it was fully assembled by the Early Permian Epoch, some 299 million to 273 million years ago. The supercontinent began to break apart about 200 million years ago, during the Early Jurassic Epoch, eventually forming the modern continents and the Atlantic and Indian oceans. Pangeas existence was first proposed in 1912 by German meteorologist Alfred Wegener as a part of his theory of continental drift. Its name is derived from the Greek pangaia, meaning all the Earth. During the Early Permian, the north western coastline of the ancient continent Gondwana, a paleocontinent that would eventually fragment to become South America, India, Africa, Australia, and Antarctica, collided with and joined the southern part of Euramerica, a paleo continent made up of North America and southern Europe. With the fusion of the Angaran craton of Siberia to that combined landmass during the middle of the Early Permian, the assembly of Pangea was complete. Cathaysia, a landmass comprising the former tectonic plates of North and South China, was not incorporated into Pangea. Rather, it formed a separate, much smaller, continent within the global ocean Panthalassa. The mechanism for the breakup of Pangea is now explained in terms of plate tectonics rather than Wegeners outmoded concept of continental drift, which simply stated that Earths continents were once joined together into the supercontinent Pangea that lasted for most of geologic time. Plate tectonics states that Earths outer shell, or lithosphere, consists of large rigid plates that move apart at oceanic ridges, come together at subduction zones, or slip past one another along fault lines. The pattern of seafloor spreading indicates that Pangea did not break apart all at once but rather fragmented in distinct stages. Plate tectonics also postulates that the continents joined with one another and broke apart several times in Earths geologic history. The first oceans formed from the breakup, some 180 million years ago, were the central Atlantic Ocean between north western Africa and North America and the south western Indian Ocean between Africa and Antarctica. The South Atlantic Ocean opened about 140 million years ago as Africa separated from South America. About the same time, India separated from Antarctica and Australia, forming the central Indian Ocean. Finally, about 80 million years ago, North America separated from Europe, Australia began to rift away from Antarctica, and India broke away from Madagascar. India eventually collided with Eurasia approximately 50 million years ago, forming the Himalayas. During Earths long history, there probably have been several Pangea like supercontinents. The oldest of those supercontinents is called Rodinia.
