# Read the following passage and answer the questions given below:

I once spent two months taming a small lizard rescued from Bedouin Arabs of the South, till he ate from my hand and knew me. If he was frightened he would swell himself out to the shape of a miniature balloon and shrink again at the touch and the safety of my hand. He had small bright triangular black eyes, and would hold his head on one side and look out of them with a Pan-like wisdom, gay and remote from ours, and, for me alone when I stroked him, these eyes turned suddenly round in their sockets; this is a strange but, according to books, natural way for lizards to express affection. The small reptile body had to die unless the sun's rays warmed a blood that runs differently from ours; yet human qualities of curiosity and courage were strangely vivid within it. He crouched, as still and small and flat as he could make himself, under the shadow of a bird overhead or of an aeroplane which he obviously held to belong to the same species; but he was ready to pick up his meal where he left it as soon as the shadow had passed, and to go round the garden nibbling at plants he had never known before. As I watched him I found it pleasant to see these human thingscourage, fear, affection, anger; tracing back to a pedigree immensely more ancient than ours.

Who can say in what remoteness of time, in what difference of earthly shape, love first came to us as a stranger in the jungle? We, in our human family, know him through dependence in childhood, through possession in youth, through sorrow and loss in their season. In childhood we are happy to receive; it is the first opening of love. In youth, we take and give, dedicate and possess, rapture and anguish and mingled, until parenthood brings a dedication that, to be happy, must ask for no return.

Question Label: Comprehension

एक बार दक्षिण के बेड्ड्न अरब से बचाई गई एक छोटी छिपकली को पालतू बनाने के लिए मैंने दो महीने बिताए, जब तक की वह मेरे हाथ से खाना खाती थी और मुझे पहचानने लगी थी। यदि वह भयभीत हो जाता तो वह स्वयं को एक छोटे गुब्बारे के आकार में बदल लेती थी और मेरे हाथ के स्पर्श पर सुरक्षा का अनुभव होते ही फिर से सिकुड जाता। उसकी आँखें छोटी चमकीली त्रिकोणीय और काले रंग की थीं। सिर को एक तरफ घुमाके वह उन आँखों से, हमसे बिलकुल अलग, एक आनंदमयी दैवी बुद्धिमतता से देखा करती थी। और जब मैं उसे सहलाता -उसकी नेत्रगोलक उनके नेत्र-कोटर में घूमा करते थे; यह अजीव था, लेकिन किताबों के अनुसार, छिपकलियों द्वारा स्नेह टयक्त करने का यह एक प्राकृतिक तरीका है। छोटा सरीसृप शरीर मृत हो जाता है अगर सूर्य की किरणों से उनका रक्त गर्म नही होता है, जो हमारे रक्त से बिलकुल अलग है; अभी तक इसमें मानव जिजासा और साहस के गुण स्पष्ट रूप से थे। वह किसी भी पक्षी या हवाई जहाज, जो उसके लिए स्पष्ट रूप से एक ही प्रजाति से संबंधित था, की परछाई में स्वयं को झुकाकर स्थिर हो जाती थी। और जितना छोटी और समतल स्वयं को बना सके, बना लेती थी। लेकिन वह परछाई के निकलने के तुरंत बाद अपना भोजन को लेने के लिए तैयार होती थी।जहाँ उसने इसे छोड़ दिया था और बगीचें के पौधों के छेदों में घूमना उसने पहले कभी नही किया था। जैसा कि मैंने उसे देखा, मुझे उसमें मानवीय चीजों को देखना सुखद लग रहा था-साहस, भय, स्नेह, क्रोध, हमारे वंश की तुलना में अधिक पाचीन।

कौन कह सकता है, कि समय के किस कालांतर में, पृथ्वी के कौन से भाग में प्रेम जंगल में एक अजनवी के रूप में हमारे पास आई थी? हम, हमारे मानव परिवार में, बचपन में निर्भरता, युवा अवस्था में अधिकार, प्रत्येक मौसम में दुख और हानि के माध्यम से उसे जानते हैं। बचपन में हम कुछ भी पाने पर प्रसन्न होते हैं; यह प्रेम की पहली शुरुआत है। युवा होने पर, हम लेते हैं और देते हैं, समर्पण करते हैं और आगे बढ़ते हैं- उत्साह और पीड़ा होने पर एकजुट हो जाते हैं, जब तक कि माता-पिता बनने पर समर्पण नहीं करते हैं, खुश होने के लिए, कोई वापसी नहीं मांगनी चाहिए। Question Number: 53 Question Id: 284703834 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes

#### Question Number: 77 Question Id: 284703858 Question Type: TYPING TEST Display Question Number: Yes

The Gross domestic product is the best way to measure a countrys economy. GDP is the total value of everything produced by all the people and companies in the country. It does not matter if they are citizens or foreign owned companies. If they are located within the countrys boundaries, the government counts their production as GDP. There are many different ways to measure a countrys GDP. Nominal GDP is the raw measurement that includes price increases. The Bureau of Economic Analysis measures nominal GDP quarterly. It revises the quarterly estimate each month as it receives updated data. Real GDP compares economic output from one year to another, you must account for the effects of inflation. To do this, the BEA calculates real GDP. It does this by using a price deflator. It tells you how much prices have changed since a base year. The BEA multiplies the deflator by the nominal GDP. The BEA makes three important distinctions. Which involves Income from U.S. companies and people from outside the country are not included. That removes the impact of exchange rates and trade policies. The effects of inflation are taken out. Only the final product is counted. For example, a U.S. footwear manufacturer uses laces and other materials made in the United States. Only the value of the shoe gets counted. The shoelace does not. GDP growth rate is the percent increase in GDP from quarter to quarter. It tells you exactly how fast a countrys economy is growing. Most countries use real GDP to remove the effect of inflation. GDP per Capita is the best way to compare gross domestic product between countries. Thats because some countries have enormous economic outputs because they have so many people. To get a more accurate picture, it is helpful to use GDP per capita. This divides gross domestic product by the number of residents. It is a good measure of the countrys standard of living. The best way to compare gross domestic product by year and between countries is with real GDP per capita. This takes out the effects of inflation, exchange rates and differences in population. The different measures of GDP are great tools for comparing the economies of other countries or how an economy changes over time. When economists talk about the size of an economy, they are referring to GDP. The growth rate measures whether the economy is growing more quickly or more slowly than the quarter before. If it produces less than the quarter before, it contracts and the growth rate is negative. This signals a recession. As bad as a recession is, you also do not want the growth rate to be too high. Then you will get inflation.
