The Koel

The Koel is one of our most familiar birds, its call being perhaps even better known than its appearance. It is about the size of the house crow but is of slenderer build and has a longer tail. It frequents gardens, groves and open country in large numbers especially large, leafy trees. It lives entirely on trees and never descends to the ground. During winter the bird is silent but with the approach of the hot weather and its coincident breeding season, it becomes extremely noisy. All through that season its loud shrill, shrieking notes resound on the countryside throughout the day and far into the night. The call begins with a low ku-oo, but rises in scale with each successive ku-oo until at the seventh or eighth it reaches feverish pitch and breaks off abruptly. The bird soon commences it all over again. Another common note is a sharp quick-repeated kik-kik-kik uttered by the female as she dashes from tree to tree or hops amongst the branches. Its food consists chiefly of banyan and peepal figs and berries of various kinds, but insects and caterpillars are also eaten. Its flight is swift and straight, and a koel fleeing before the vindictive onslaught of a pair of angry crows is a common sight.

The laying season is mainly from April to August and corresponds with that of its most usual host, the house crow. Its eggs are rather smaller, but very like the crow's in appearance. As many as 11 have been found in a single crow's nest. The female Koel seizes the opportunity to deposit her egg in the crow's nest while the male deliberately draws the owners away by leading them on a chase.

कोयल

कोयल हमारे सबसे परिचित पक्षियों में से एक है, इसे इसकी आवाज के लिए ज़्यादा बेहतर तरीके से जाना जाता है। यह लगभग छोटे कौवे के आकार का होतीहै, लेकिन इसकी संरचना संकरे आकार की होती है और इसकी पूंछ लंबी होती है। यह देश में बड़ी संख्या में बगीचे, उपवन और खूले में पायी जाती है, विशेष रूप से बड़े, पत्तेदार पेड़ों में अक्सर यह बड़ी संख्या में पायी जाती है। यह हमेशा पेड़ों पर रहती है और जमीन पर कभी नहीं उतरती है। सर्दी के दौरान यह शांत रहती है, लेकिन गर्म मौसम और इसके प्रजनन के मौसम में इसकी आवाज बह्त अधिक सुनी जा सकती है। उस मौसम में इसके जोरदार तेज आवाज पूरे दिन और पूरी रात ग्रामीण इलाकों में सुनी जा सकती है। इसकी आवाज कु-ऊऊ के साथ शुरू होती है, लेकिन इसकी आवाज प्रत्येक क्रमिक क्-ऊऊ के साथ तब तक बढ़ती जाती है जब तक कि सातवीं या आठवीं आवाज में बह्त तेज न हो जाए और अचानक से रूक जाती है। इसकी आवाज जल्द ही फिर से शुरू हो जाती है। एक और आम बात इसके बारे में यह है कि मादा अपनी आवाज बहुत तेज किक-किक-किक दोहराती है क्योंकि वह पेड़ से पेड़ या शाखाओं के बीच डालियों पर घूमती रहती है। इसका मुख्य भोजन बरगद और पीपल के अंजीर और विभिन्न प्रकार के जामुन है, लेकिन यह कीड़े और मकोड़े भी खा जाती है। यह तेजी से और सीधे उड़ती है और नाराज कौवे जब इस पर विरोधाभास के दौरान हमला करने आते हैं, तो हमला करने से पहले ही कोयल भाग जाती है। इसके प्रजनन का समय मुख्य रूप से अप्रैल से अगस्त तक होता है और इसका सबसे सामान्य समुदाय छोटे कौवे की तरह ही होता है। इसके अंडे छोटे-छोटे होते हैं, लेकिन काफ़ी हद तक कौवे की तरह ही होते हैं। एक कौवे के घोंसले में 11 से ज्यादा अंडे पाए जाते हैं। मादा कोयल अपने अंडे को कौवा के घोंसले में जमा करने का मौका ढूंढती है जबिक नर जानबूझकर कौवों को उनके घोसले से उन्हें दूर ले जाते हैं।

a distribution option (170 option official)

In the following question, a word is represented by only one set of numbers as given in any one of the alternatives. The sets of numbers given in the alternatives are represented by two classes of alphabets as in the two given matrices. The columns and rows of Matrix I are numbered from 0 to 4 and those of Matrix II from 5 to 9. A letter from these matrices can be represented first by its row and then the column number e.g. in the matrices for questions 1 to 4, S can be represented by 14, 21, etc; E can be represented by 20, 32, etc. Similarly you have to identify the correct set for the word given in the question.

Conservation of nature refers to the conservation of all those resources that are formed naturally without any kind of help from the human beings. These include water, air, sunlight, land, forests, minerals, plants as well as animals. Together, all these natural resources make life worth living on Earth. Life would not be possible without air, water, sunlight as well as other natural resources present on the planet. It is thus essential to conserve these resources in order to keep the environment intact. Here is a look at the kind of natural resources present on Earth and the ways to conserve these. Renewable Resources. These are resources such as air, water and sunlight that replenish naturally. Non-Renewable Resources. These are resources like fossil fuels and minerals that do not replenish or form very slowly. Biotic, These come from living beings and organic material like plants and animals. Abiotic. These are derived from non-living things and non-organic material. These include air, water and land as well as metals like iron, copper and silver. Natural resources are also divided into categories such as actual resources, reserve resources, stock resources and potential resources based on their development stage. Conservation of nature is a subject that requires serious attention. Most of the resources of nature are depleting at a fast rate. This is because the demand of these resources is high while the rate of their formation is low. However, it needs to be understood that nature has given us abundance of all that we require. We require using the available natural resources wisely and must employ the below mentioned methods to conserve these. Limit Usage. Water and electricity are two things that are being wasted the most. It is essential to understand the importance of saving both these. Use only as much water as you require. Same goes for electricity. Use the electric appliances wisely and turn them off when they are not in use. Similarly, the use of other resources such as paper, petroleum and gases must also be restricted. Recycle. There are a lot of things such as paper, cardboard, metal, tin, aluminium foil, glass bottles, plastic containers as well as water that can be recycled and reused. Replenish Nature. Plant more and more trees to make up for those that are cut for manufacturing paper, furniture and other items made of wood. Also ensure cleanliness around your area. Do not throw waste products in water bodies and elsewhere. Spread Awareness, Lastly, spread as much awareness as you can about the importance of conservation of nature. The consumption of natural resources has far exceeded their production. It is the duty of each one of us to stop wasting these gifts of nature and start using them wisely so as to maintain ecological balance on Earth.
